

Improvements

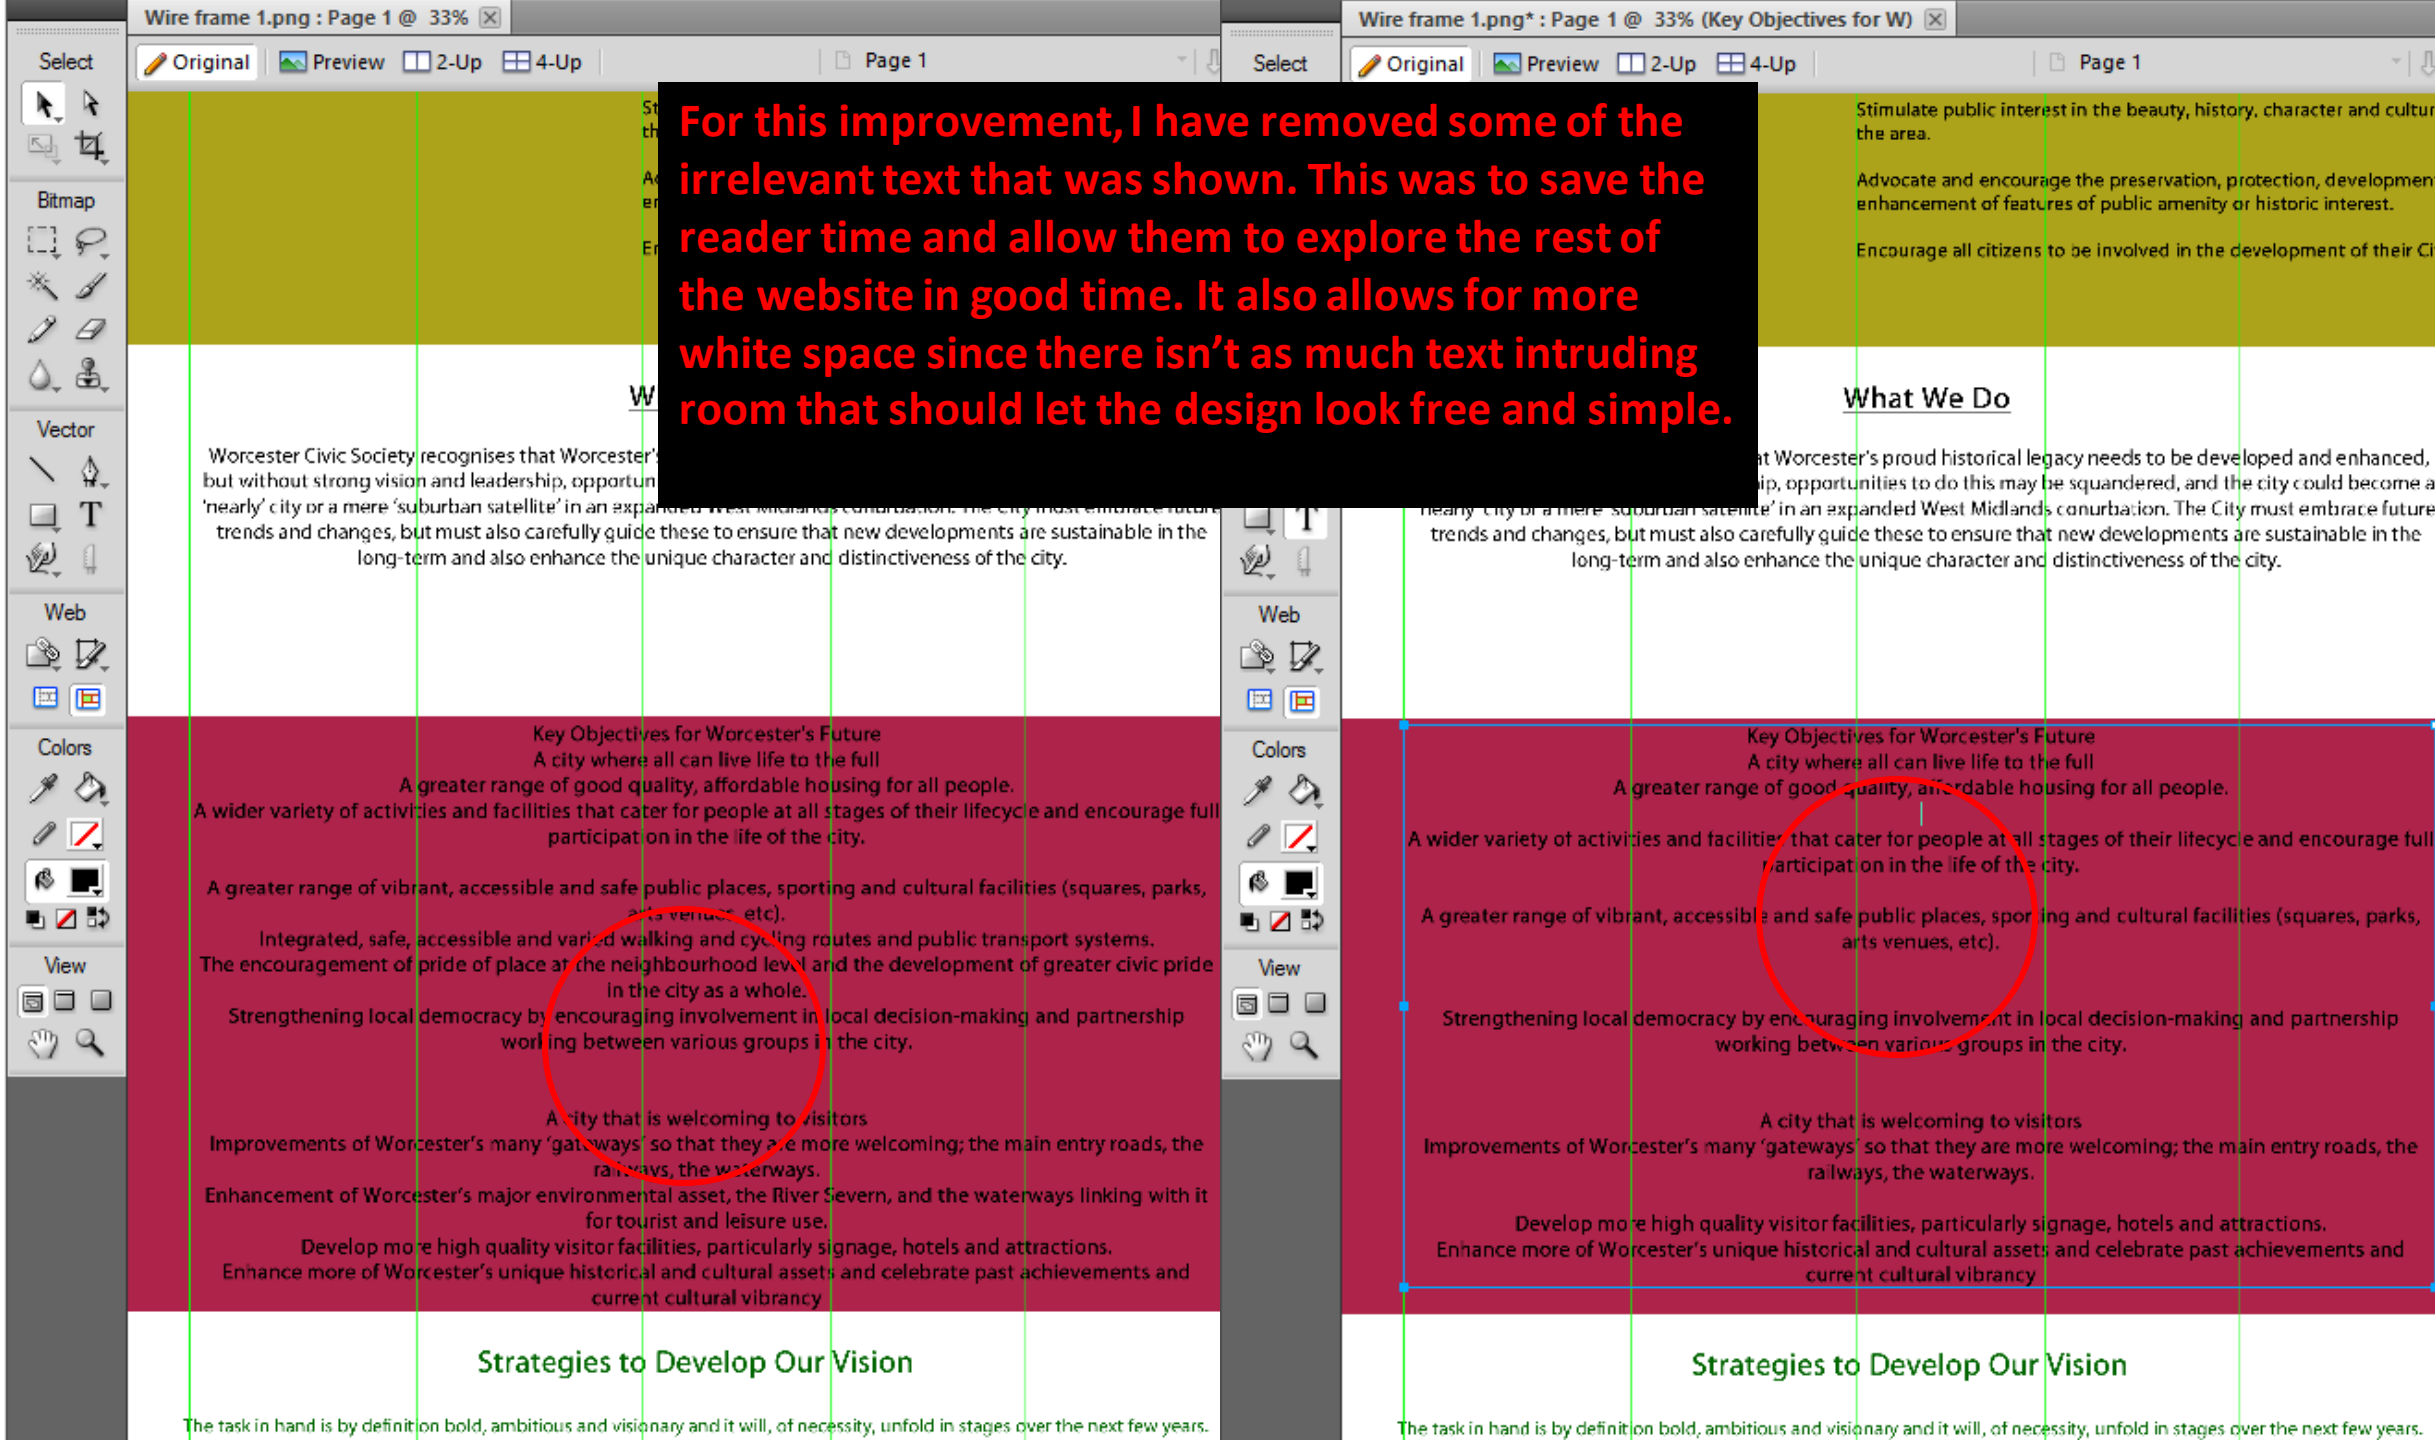

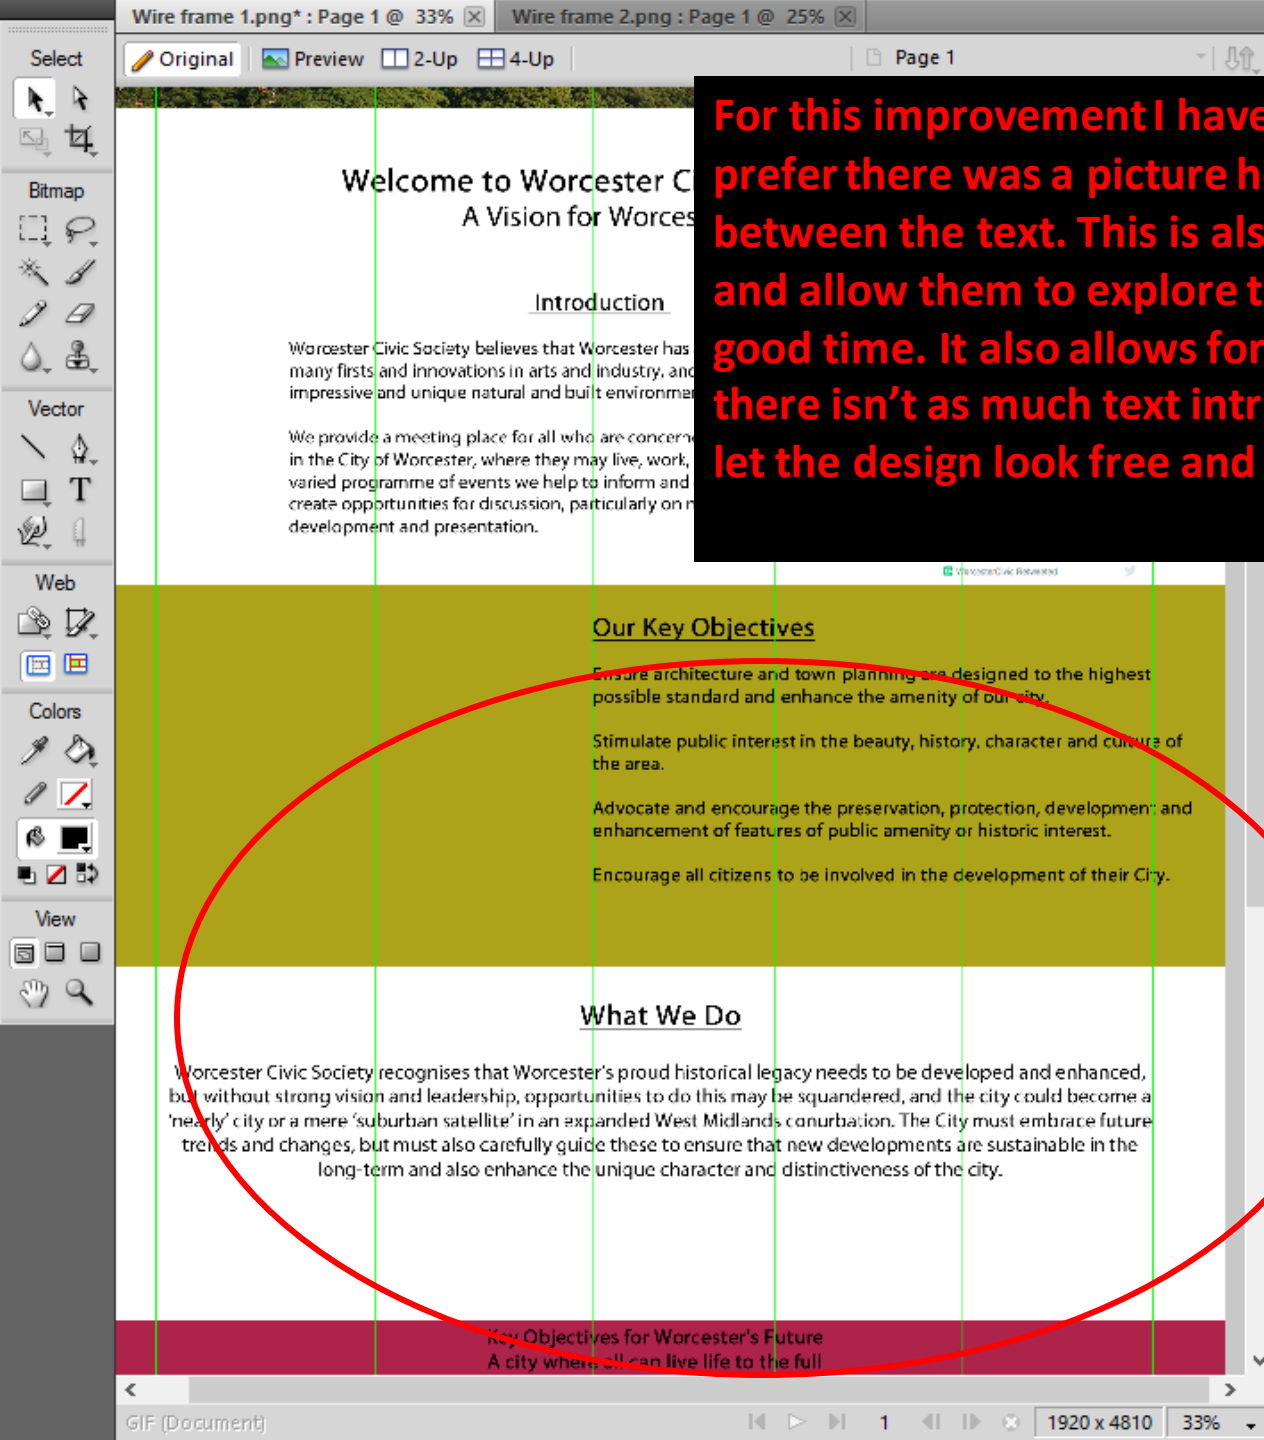

For this improvement, I have changed the text alignment so that the design looks much slicker. It also shows that some care has gone into the design and that it is not lazily done. It helps with the simplicity of designing the website since it will be easier to place it in the middle rather than placed by guess

For this improvement, I have removed some of the irrelevant text that was shown. This was to save the reader time and allow them to explore the rest of the website in good time. It also allows for more white space since there isn't as much text intruding room that should let the design look free and simple.

For this improvement I have decided that I would prefer there was a picture here to provide a break between the text. This is also to save the reader time and allow them to explore the rest of the website in good time. It also allows for more free space since there isn't as much text intruding room that should let the design look free and simple.
